

Professional Offer

For Your Industrial Deployment of Eclipse Sirius

Obeo Designer guarantees the set up and the deployment of industrial-strength Modeling Workbenches created with Sirius. It provides professional support and collaborative features.

Collaborate with Your Team Members

Simultaneously work on visual representations for the same data, without losing time managing conflicts and without any technical skills

Secure Your Deployments

Secure the success of your critical projects with access to cutting-edge technical expertise and a commitment regarding response times

Drive the Roadmap

Contribute to the co-financing of the Sirius Open Source project and get involved in the definition of priorities and the development of features that match your needs

To deploy Sirius on your projects, subscribe to our professional support services

GOLD

A plan adapted to
small or medium projects

PLATINUM

The perfect plan to secure
large or critical projects

Guaranteed & Private Support

Get answers to an unlimited number of technical questions from Obeo experts, with the guarantee of confidentiality and response times.

In addition, you can submit your modeling tools for a review and get our advice regarding best practices: ergonomics, architecture, packaging, deployment, performance, etc.

Fixes & Specific Builds

Obeo Designer subscription allows you to receive hotfixes that are delivered before the scheduled software maintenance versions.

You can benefit from a private and confidential infrastructure that supports your specific version of the software, integrating urgent fixes and your specific requirements.

Collaborative Features

To facilitate collaborative work Obeo Designer allows you to store your models and representations (diagrams, tables, matrices, trees) in a shared repository.

Fine grained automatic locking system and instantaneous updates of user modifications provide a fluent way to work with your team members.

Open Innovation

Obeo Designer relies heavily on Open Source projects and, as such, it is important to contribute so as to maintain their longevity.

The Open Innovation service enables you to get involved in the supported technologies roadmap: priorities definition and Open Source contributions in the source code of the projects.

Obeo provides open software solutions to create and transform Industrial systems (avionics, space, defense, energy, transportation, etc.) and complex softwares.

Part of The Open Group and a strategic member of the Eclipse® foundation, Obeo develops solutions that combine the openness of Open Source and the reliability of a software provider.

Our core business consists in helping our customers implement innovative and custom modeling solutions.

Sirius is a proven Open Source technology that enables users to easily design custom modeling workbenches.

With Sirius users can benefit from both a modeling tool that fits their business as well as a methodological approach that suits their projects.

Aside from the complete openness that allows for this customization, Sirius also offers a number of features that enable users to manage complex models: conditional styles, layers, filters, etc.
